General Description

The DA9057 is a highly integrated power management, audio and user interface controller dedicated for multimedia players, portable navigation systems and other handheld devices.

PMIC
Four DC-DC converters and ten low dropout regulators are provided, each fully configurable on startup to support a wide range of application processors, associated peripherals and user interface functions.

Featuring a dual-input switched-mode charger, three-way USB powerpath management and multiple sleep modes the device offers an energy-optimised solution for a wide variety of portable applications.

Interfacing directly to a single Li-Ion/Polymer battery pack the high efficiency switching charger supports precise current/voltage charging as well as pre charge and USB modes without processor interaction. During charging the die temperature is thermally regulated enabling higher capacity batteries to be rapidly charged at currents up to 1.3A with minimum thermal impact to space-constrained PCB’s.

USB suspend mode operation is supported; for robustness the 500mA current-limited USB power inputs are internally protected against over-voltage conditions. The autonomous power path controller seamlessly detects and manages energy flow between an AC adaptor, USB cable and battery whilst maintaining USB power specification compliance. The internally-generated system power rail supports power scenarios such as instant-on with a fully discharged battery. A reverse-protected backup battery charger is also integrated into the power path function. The power efficiency and flexibility of the switching input stage is maintained to the generated supplies.

Controlled by a programmable digital power manager the 14 user-programmable switched/linear regulators may be configured for a variety of start up sequences, levels and timings

For optimal processor energy-per-task performance dynamic voltage scaling is permissible on up to five supply domains. Dialog’s patented Smart Mirror™ dynamic biasing is implemented on all linear regulators.

Audio
A high definition audio codec with integrated true-ground capless headphone driver suitable for a variety of low power, digital portable audio products.

Featuring a high efficiency class G headphone amplifier and a common supply voltage of 1.8V to simplify interfacing to digital processors, the ultra-low 2.5mW power consumption extends music playback time for battery operated equipment.

Applications

Personal Media Players
Smart phone
Personal Navigation devices
Consumer Infotainment devices

Available in VFBGA 7x7mm Package

The integrated PLL uses a FRACT-N PLL architecture to support a wide range of input frequencies and sample rates. Both master and slave data interface modes are supported.

Eight analogue input pins allow multiple audio sources to be internally mixed, eliminating the need for external switches. Both single-ended and fully-differential line and microphone inputs are supported with built-in variable gain amplifiers to optimize dynamic range prior to digitisation. This allows a diverse variety of analogue audio sources such as baseband voice, mobile TV, WiFi and FM radio to be managed.

For example the dc-coupled, dedicated pop-free drivers may be connected to stereo headphones, stereo speaker and mono line out, all simultaneously and without external switches.

All filtering and sidetone functions are performed digitally including 5-band EQ and a digital input AGC with programmable attack and decay parameters. A configurable signal processing filter engine allows various audio application enhancements and effects i.e. acoustic filtering, wind noise suppression and 3D sound.

Alternatively the filter engine may be programmed to improve the frequency response of an external speaker or headphone by providing an 8-pole per channel equalisation function. This is available in addition to the 5-band EQ.

PMIC Features

- Switched DC/USB Charger with power path management
- 4 Buck Converters (3 with DVS) 0.5V-3.6V up to 1Amp
- 10 Programmable LDO’s High PSRR, 1% accuracy.
- Low power Backup Charger 1.1-3.1V up to 6mA
- 32kHz RTC Oscillator
- 10 channel general Purpose ADC with touch screen interface
- High voltage White LED driver 24V/ 50mA Boost, 3 strings
- 16 bit SPI bus for enhanced wakeup and peripheral control
- Dual serial control interfaces
- Unique USB supply detection and charge current selection
- Unique ID code capability with OTP memory

Audio Features

- High performance audio codec with integrated PLL
- True-GND capless Class G 40mW headphone driver with integrated charge pump
- Supply operation: 1.8 – 2.5V
- Flexible clocking capability to minimise master clock circuit board routing
- Fully differential mono voice channel
- Pop & Click suppression circuitry
- Multi mode audio routers and mixers & volume control
- Linux and WinCE software drivers available

Audio Key Parameters

- Stereo Playback/Record: 2.5mW & 3.5mW @ 1.8V
- Audio performance@ 2.5V
- - DAC: 102dB/-85dB THD
- - ADC: 96db SNR/-89dB THD
- Sample rates up to 96kHz supported via multi-slot I2S/PCM interface
- Stereo fully-differential microphone amplifiers with 5uV input noise and bias
- DSP 5 Band EQ, Input ALC, programmable noise and acoustic enhancement filters

Peripherals and Connectivity

- Power Manager with programmable Start-up and configurable low power modes
- System Monitor including watchdog timer
- Up to 16 free configurable GPIO Pins enable system control during application standby modes
- General purpose monitoring ADC
- 10-bit 4 wire Touch-Screen Interface
- Real-time clock and alarm with crystal frequency adjustment and oscillator circuitry
- Unique ID Code via 10 free programmable registers (OTP)
- Optimized size 7x7mm BGA169 package – 0.5mm pitch

Audio Features

- High performance audio codec with integrated PLL
- True-GND capless Class G 40mW headphone driver with integrated charge pump
- Supply operation: 1.8 – 2.5V
- Flexible clocking capability to minimise master clock circuit board routing
- Fully differential mono voice channel
- Pop & Click suppression circuitry
- Multi mode audio routers and mixers & volume control
- Linux and WinCE software drivers available

Audio Key Parameters

- Stereo Playback/Record: 2.5mW & 3.5mW @ 1.8V
- Audio performance@ 2.5V
- - DAC: 102dB/-85dB THD
- - ADC: 96db SNR/-89dB THD
- Sample rates up to 96kHz supported via multi-slot I2S/PCM interface
- Stereo fully-differential microphone amplifiers with 5uV input noise and bias
- DSP 5 Band EQ, Input ALC, programmable noise and acoustic enhancement filters
